- 10 mechanical toilet frames
- 16 electronic toilet frames
- 20 urinal frames
- 24 washbasin frames
- 28 bidet frame
- 32 General technical information
- 33 Equipment and functions
- 34 Flush volume and flush flow
- 35 Technical data
- 52 Actuator plates for WC
- 53 Actuator plates for urinal

## In front of the wall: Original Duravit Design. Behind the wall: DuraSystem<sup>®</sup>.

**DuraSystem® toilet frames:** Five different installation frames for dry and wet installation. Four actuator plates, mechanical and electronic.

#### DuraSystem<sup>®</sup> urinal frames:

Two installation frames: Standard (for exposed flushing valves, integrated sensor control and waterless urinals) and concealed flushing valves. Seven actuator plates for mechanical and electronic operation.

The DuraSystem<sup>®</sup> installation frames offer reliable concealed solutions for the toilet, urinal, wash- basin and bidet. For the most common installation scenarios, whether dry-wall or wet construction. Pre-assembled installation frames ensure quick, reliable and economical installation. Duravit gives bathroom designers and bathroom users the peace of mind that everything is perfectly harmonized, both on a functional and formal level.

This is also evident in the high-quality actuator plates that enable the DuraSystem<sup>®</sup> technology to be seen and experienced. The actuator plates are available for toilets and urinals with mechanical and electronic flush activation. With their clear, timelessly modern look they blend harmoniously into any bathroom environment.

With the DuraSystem<sup>®</sup> installation frames, matching actuator plates, and a comprehensive product range – ceramics, wellness technology, bathroom furniture and accessories – Duravit delivers techno-logically smart, full solutions from a single source, for new builds and renovation projects in the private, semi-public, and public areas. You can find suggestions for ideal product combinations under "Perfect fit" in this brochure.

#### DuraSystem® washbasin frames:

Three installation frames and accessories for all washbasin installations, also for wallmounted faucets. **DuraSystem® bidet frame:** One installation frame for bidets, including matching accessories.

## Well thought-out features that make installation easier.

DuraSystem<sup>®</sup> doesn't just inspire bathroom users - it's also a source of inspiration for bathroom professionals. That's because, thanks to the many well thought-out features and sophisticated details, the installation elements are particularly easy to assemble. This means that all elements can be installed quickly, conveniently and smoothly on the construction site.

Protective box assembly without the need for tools: — Quick click assembly without screws

High quality powder coating:
Scratch and shock resistant, corrosion resistant

#### A system with lots of great features.

#### Easy to assemble:

A host of clever details make it easy and convenient to install on walls and floors.

#### No need for tools:

Click and snap everything into place - no need for any screws - in numerous work steps.

#### Flexible:

Compatible with any existing drinking and sewage pipe system. Cistern-independent hygienic flushing, easy installation of electronic components.

#### Versatile:

Wide range of toilet flush plates and urinal flush systems, ideal for tenders and customer requests.

#### **Reliable:**

100% made in Germany means quality, safety and reliability for permanently satisfied customers.

#### **Partnership:**

Duravit Service provides quick support for all queries and problems.

#### Exposed outlet bend:

- Both hands free when working
- Mounting with quick assembly clip and without the need for tools
- Three-way adjustabl<u>e depth</u>

#### Clickable grid wall bracket made of fiber-reinforced plastic

- particularly easy to snap into the element without the need for tools
- Depth can be adjusted without tools using a wing nut
- Can be easily shortened on site

#### Extremely easy attachment:

- free placement of the drill holes — Freely movable mounting plate for wall and floor
- 4 times larger surface for drill hole placement

#### Practical footplate:

- Can be used in both directions
   Non-slip, safe guide for UW50 and UW75 profiles in lightweight stand construction systems
- Flexible for subsurface problem areas
- 4 times larger area for drill hole placement - Stand with up to 240 mm height adjustment as standard

# Impressive technology, safe and efficient installation.

The DuraSystem<sup>®</sup> toilet frames for the highest standards, with especially convenient functions, available in the versions Standard Basic, Standard and Standard Plus. Whether in the project area or the private bathroom: No matter where wall-mounted toilets with mechanical flush actuation are to be installed, the self-supporting DuraSystem<sup>®</sup> installation frames offer the perfect technical starting point. The largely prefabricated installation frames enable rapid installation, and the open system ensures the utmost flexibility for laying any supply and drainage pipes.

**Standard Basic:** dry-wall installation elements in three construction heights, one element suitable for wetwall installation, for bricking up in solid structures. Frames can be equipped with a hygienic flush optionally.

**Standard:** dry-wall installation elements in three construction heights, with wall brackets, prepared for the installation of a Duravit SensoWash<sup>®</sup> shower toilet. Frames can be equipped with a hygienic flush optionally.

**Standard Plus:** one dry-wall installation element, with wall brackets, integrated ventilation for comfortable odour extraction, which is activated via a separate button (to be fitted on site) on the wall. Prepared for the installation of a Duravit SensoWash® shower toilet.

For elements in 84 and 99 cm height the actuator plate A1 in white or chrome plastic can optionally be operated from the front or from above.

 240 mm, rotating base plate for flexible floor-fixing options and firm footing

# Best in class when it comes to hygiene, comfort and design.

The Premium element is equipped with a hygienic flush. Premium Plus offers both a hygienic hygienic flushing as well as convenient odour extraction.

**Hygienic flush:** Ideal for the semi-public and public area, and also enhances hygiene in private bathrooms: The DuraSystem<sup>®</sup> installation frames for toilets with electronic flush actuation. To avoid stagnant water and the possibility of increased formation of germs, hygienic flushes are triggered automatically at given intervals. These intervals and the flushing water volumes can be adjusted as required. Mechanical toilet frames can also be retrofitted with hygienic flush

**Odour extraction:** The toilet frame with the quiet fan for better air quality: Odours are extracted from the toilet before they can spread. Because odours are extracted directly through the toilet flush pipe, no additional exhaust air ducting is needed. The system is not only low-noise, it also works without filters, meaning that no costs are incurred for filter exchange or maintenance. Odour extraction can be activated either manually or via automatic user detection.

The DuraSystem<sup>®</sup> A2 actuator plate made from high-quality ESG glass is equipped with a sensor system that enables contact-free operation. When someone approaches, the operating symbols on the plate are softly illuminated.

If the nightlight function is activated, the illumination switches on or off automatically depending on the ambient brightness. This means that the operating symbols on the actuator plate are permanently illuminated in the dark.

# The flexible solution for every project.

No public or semi-public sanitary facility is complete without a urinal. Similarly, they are becoming increasingly popular in high-end private bathrooms. The appropriate DuraSystem® installation frames ensure safe and reliable technology behind the wall. The range comprises a version for concealed flushing valves and a standard frame that can be combined with waterless urinals, urinals for exposed flushing valves, and urinals with integrated sensor control.

The applications for the urinal frame for concealed flushing valves are extremely flexible as it can be activated both with actuator plates with manual flush actuation and also via infrared proximity electronics. The electronic variant is available both as a battery-operated and a mains-powered version. The frame is also suitable for urinals with water inlet from behind. It is quick and easy to install, guaranteeing a high level of flexibility for any project.

The highest level of functionality is also called for in front of the wall, and that's ensured by suitable surface-mounted actuator plates. The electronic actuator plates A2 are also suitable for use with urinals with a cover.

#### Perfect fit

- DuraSystem<sup>®</sup> urinal frame for the concealed flushing valve # WD3004 000 000

# Ideal starting point for a wide range of applications.

Whether in a private bathroom, in the public or semi-public area: The DuraSystem® washbasin frames are a solid technical starting point for practically all applications. The washbasin frame Standard is compatible with almost all Duravit washbasins, e.g. siphon cover or design siphon. The DuraSystem® washbasin frame special with wooden crossbar affords the greatest possible flexibility for washbasins with typical installation dimensions and washbasins with a pedestal. A frame suitable for combination with a wall-mounted faucet is also available. Rapid and simple fitting guaranteed, for all variants

The Duravit faucet ranges are also perfectly harmonized with the DuraSystem<sup>®</sup> installation frames and Duravit washbasins: Whether iconic and straight-lined like C.1, elegant and timeless like B.1 or contemporary and pared-down like B.2: A comprehensive range covers all stylistic preferences and washing-area plans.

#### DuraSystem® washbasin frames

#### Washbasin frame Standard # WD2004 000 000 Compatible with Duravit washbasins, with the standard attachment dimensions: Angle valve distance 80 – 150 mm, threaded bolt distance 280 mm or 150 – 240 mm in the inset slot. Attachment dimensions can be configured via a metal crossbar. Infinitely adjustable crossbars.

#### Washbasin frame Special # WD2005 000 000

# WD2005 0000 Compatible with Duravit washbasins, with different attachment dimensions: Angle valve distance 80 – 290 mm, hanger bolt distance 50 – 330 mm, e.g. for handrinse basins with hanger bolt distance < 150 mm or washbasins with a pedestal.

Attachment dimensions can be configured via a wooden crossbar. Infinitely adjustable crossbars.

Washbasin frame for wall-mounted faucets # WD2006 000 000 For ceramic washbasins without tap hole, wall-mounted faucets can be attached via a wooden crossbar. Infinitely adjustable crossbars.

# General technical information.

Dry-wall installation in front of solid wall

Dry-wall installation in a plasterboard wall frame

Wet installation

#### **Types of installation**

DuraSystem<sup>®</sup> installation frames are available for a range of installation types. The high degree of prefabrication and integrated expertise enable quick and easy installation.

As open systems they guarantee the utmost flexibility for the installation of all supply and drainage pipes.

#### Dry-wall installation

- For wall-mounted toilet installations for individual installation in front of solid wall or individual installation in a plasterboard wall (including wooden wallboard)
- Toilet frame incl. SensoWash®prepared
- Insulated against condensation
- Mechanical and electronic operation from the front, wet installation

#### Wet installation (toilet frame)

- For wall-mounted toilet installation in solid structures, for wall-in and bricking up
- Without SensoWash® preparation
- Insulated against condensation
- Mechanical operation from the front

# Equipment and functions.

### Standard equipment on all installation frames:

Height-adjustable feet from 0 – 240 mm, raised floor constructions up to a maximum of 480 mm with accessories (# WD6012 000 000) can be realized

Rotating base plate for flexible floor-fixing options and firm footing for plasterboard lightweight profiles UW 50 and UW 75 großer Large area for drill hole placement

The depth of the adjustable wall brackets can be adjusted without tools and can be shortened on site (except Standard Basic)

Cross beams adjustable in height without the need for tools

Rule mark (FF + 1 m) and centre mark: Markings on the frame for easier frame alignment (except for reduced height)

### Special equipment on certain models:

Optimum access when using a press tool thanks to flattened areas at the appropriate point, with rear or side water connection

Crossbar with prefitted, concealed plastic housing and quick-fitting system for urinal frame

Toilet frame is prepared for connection of SensoWash® shower toilets

Hygienic flush

Frame is prepared for electronic actuator plate

Toilet frame with fan: Odours are extracted directly from the toilet.

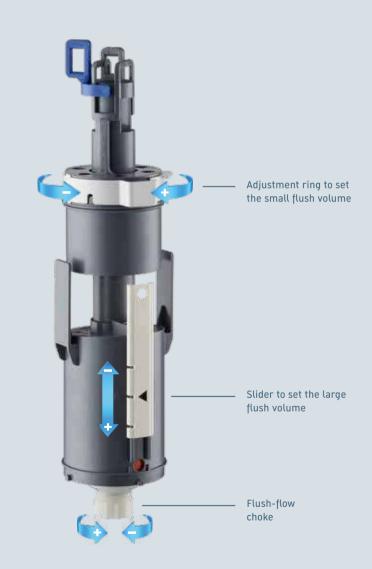

# Flexible adjustment options: Flush volume and flush flow.

### Generous or sparing: Individually adjustable flushing volumes.

Depending on user needs, the flushing volumes can be individually adjusted via the waste outlet (mechanical variant) or remote control (electronic variant). Large flush volume: Factory setting approx. 6 litres, can be adjusted to max. 7 litres and min. 4.5 litres (+/- 0.1 litres). Small flush volume: Factory settings from 3 litres, can be adjusted. In the event of problematic waste pipes, the flush volume can be increased via a simple setting on the waste outlet.

### Perfectly configured flush flow: thanks to flush-flow choke.

Regardless of the toilet model, the flush flow can be individually adjusted without reducing the flush volume. If necessary, the integrated flush-flow choke even enables the flush flow to be reduced after installation. The flush flow can be reduced via a simple rotation.

Splash-free flushing thanks to a perfect flush flow

Expansion element	# WD6013 000 000
Support for expansion element	# WD6014 000 000

## DuraSystem® Waschtisch-Element für Wandarmatur

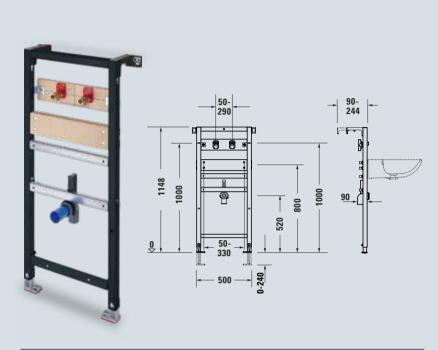

#### **Product description**

#### Washbasin frame

- Pre-assembled washbasin frame
- Wooden crossbar for flexible attachment of the ceramic appliance
- For ceramic washbasins without tap platform for wall-mounted faucets
- Self-supporting
- For dry-wall installation
- Suitable for paneling with plasterboard
- Powder coated frame
- Height-adjustable feet 0 240 mm
- Rule mark and centre mark
- Cross beams adjustable in height without the need for tools
- Noise-tested pursuant to DIN 4109 and VDI 4100 (in combination with noise-reduction set # WD6015 000 000)

#### Supplied

- Hanger bolts M10
- Noise-insulation mats G½
- Outlet pipe clamp DN 50
- HT outlet bend DN 50/40
- Installation accessories for installation in a plasterboard wall frame
- Installation accessories for individual installation

Expansion element	# WD6013 000 000
Support for expansion element	# WD6014 000 000

### DuraSystem® bidet frame

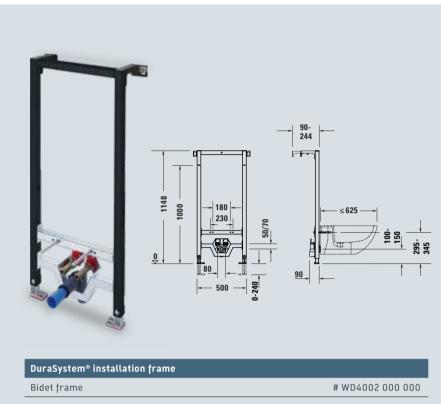

#### **Product description**

#### **Bidet frame**

- Pre-assembled bidet frame for wall-mounted bidet
- Metal crossbar for attaching ceramic appliance
- Self-supporting
- For dry-wall installation
- Suitable for paneling with plasterboard
- Powder coated frame
- Height-adjustable feet 0 240 mm
- Rule mark and centre mark
- Cross beams continuously adjustable in height
- Noise-tested pursuant to DIN 4109 and VDI 4100 (in combination with noise-reduction set #WD6015 000 000)

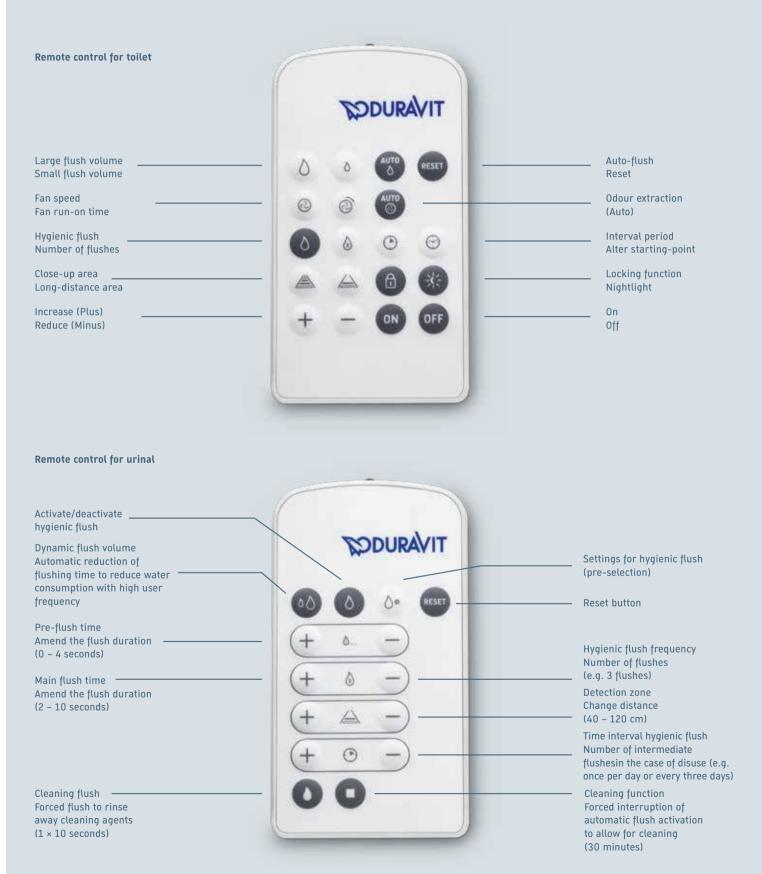

#### Supplied

- Threaded bolts M12
- Noise-insulation mats G½
- Outlet pipe clamp DN 50
- HT outlet bend DN 50/40
- Installation accessories for installation in a plasterboard wall frame
- Installation accessories for individual installation

# DuraSystem<sup>®</sup> remote control for toilet and urinal Actuator plates A2

## DuraSystem<sup>®</sup> actuator plate for toilet General technical information

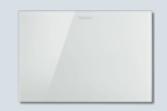

DuraSystem® actuator plate A1 # WD5001 011 000 white plastic

DuraSystem® actuator plate A1 # WD5001 021 000 plastic high-gloss chrome

DuraSystem® actuator plate A1 # WD5002 012 000 white tempered safety glass

DuraSystem® actuator plate A2 # WD5003 012 000 with infrared proximity electronics white tempered safety glass

## Functions of actuator plate A2 for toilet Manual operation

The basic functions – large and small flush, odour extraction – can be selected directly via the corresponding symbols on the actuator plate. The odour extraction function is only available in combination with the toilet frame # WD1014 000 000

#### **Contact-free operation**

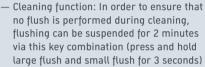

The basic functions can also be selected contact-free from a distance of around 1 cm in front of the actuator plate. When inactive, the actuator plate is not lit (unless the nightlight is activated); the symbols on the plate only light up when someone approaches. The user-detection range can be adapted to the specific circumstances

#### Setting with the supplied remote control

- Flush volume: large or small flush
- Auto-flush (activate/deactivate)
- Hygienic flush: (Starting point, number of flushes, flushing intervals)
- Odour extraction (automatic/manual/ run-on time/extraction capacity)
- Nightlight (activate/deactivate)
- Locking function (activate/deactivate)
- Detection zones: Set range (close-up area approx. 20 – 60 cm or long-distance area approx. 60 – 100 cm)
- Reset: restore any settings made to factory settings

#### Additional features

- Auto-flush: A large flush is triggered auto-matically if the user leaves the toilet without flushing
- Hygienic flush: To avoid stagnant water in the feed system, regular automatic flushes are performed when the toilet is not in use
- Nightlight: All the buttons are illuminated permanently for orientation purposes when the light is dim
- The nightlight function switches on or off automatically, depending on the ambient light

 Locking function: prevents "playing" with the actuator plate and the resulting increase in water consumption. If the actuator plate is pressed at short intervals (5 × within 2 min-utes), the buttons fade out for 2 minutes, and the functions are disabled for this period

#### **Protection and safety**

In the event of mains power supply outage, the system immediately switches to emergency power (battery operation), and various func-tions are automatically deactivated to reduce the power required. The LEDs integrated in the actuator plate display the current battery status, so batteries can be replaced in time should this be necessary.

Here's the video of how the actuator plate A2 works. www.duravit.com/durasystem

**Mounting from above** Optional positioning of the actuator plate for Standard Basic and Standard frams in 84 and 99 cm height.

Surface-mounted installation With this installation type, the actuator plate is placed wholly over the surface, e.g. tiles. All actuator plates can be installed in this configuration. Installation frames and accessories are supplied separately.

#### Flush-mounted installation

The actuator plate can be fully integrated into the wall using an installation frame available separately. Only available for Al in plastic white and plastic high-gloss chrome. Essential for initial structural construction. Suitable for dry-wall panel-ing with a minimum thickness of 25 mm.

# DuraSystem<sup>®</sup> actuator plates for urinal General technical information

DuraSystem® actuator plate A1 # WD5004 011 000 white plastic

DuraSystem® actuator plate A1 # WD5004 021 000 plastic high-gloss chrome

DuraSystem® actuator plate A1 # WD5005 012 000 white tempered safety glass

DuraSystem® actuator plate A2 # WD5006 013 000 battery-operated # WD5007 013 000 mains operation with infrared proximity electronics die-cast zinc white

DuraSystem® actuator plate A2 # WD5006 023 000 battery-operated # WD5007 023 000 mains operation with infrared proximity electronics die-cast zinc high-gloss chrome

# Functions of actuator plate A2 for urinals with infrared proximity electronics

Approaching users are detected by an infrared sensor, and a flush is automatically triggered after a given period of time. The infrared proximity electronics are located on the reverse of the actuator plate: The basic functions can be set and altered via a membrane keypad and the electronics restored to factory settings.

#### **Basic features**

- Pre-flush: In addition to the main flush, a pre-flush can be activated that is triggered as soon as a user enters the detection zone
- Main flush: duration of flush can be set for 2 - 10 seconds
- Detection zone: configurable range of approx. 40 – 110 cm
- The reset function enables any settings made to be restored to factory settings
- All basic and additional functions can also be controlled via the supplied remote control

#### **Additional features**

- Dynamic flush volume: With high user frequency, the flush duration for the main flush is automatically reduced, reducing water consumption
- Hygienic flush: Flush volume and flush interval can be configured
- To avoid stagnant water in the feed system, regular automatic flushes are performed when the urinal is not in use
- Cleaning function: Forced interruption of the main flush for urinal cleaning, or when cleaning agents have been applied
- Cleaning flush: Triggers a forced flush to clean the urinal of cleaning agents

#### Surface-mounted installation

With this classic installation type, the actuator plate is placed wholly over the surface, e.g. tiles. Installation frames and accessories are supplied.

#### Installation with locking screw

Secures the actuator plates at the installation point and enhances safety in the public/semi-public area.
