Ordinary becomes extraordinary

We believe in creating sustainable living spaces where high quality and timeless design unite to foster a unique sense of well-being. With our customers at the center of our doing, we strive to elevate the Duravit experience through our products, services, and commitment to sustainability.

With the design and quality of the Duravit products even the most ordinary, mundane moments appear aesthetic and artistic. We discover the beauty in the small everyday moments of our life.

Upgrade your everyday.

Our Brand Values

DESIGN

Design at Duravit transcends visual aesthetics; it's an emotion that shapes our daily experience. We prioritize a user-centric approach, ensuring our designs meet the needs of aesthetics, functionality, sustainability, and emotional resonance – in both production and use.

Our commitment to sustainability is reflected in our choice of materials, manufacturing processes, and product durability.

We collaborate with a diverse range of designers, from renowned names like Philippe Starck, Antonio Citterio, Christian Werner and Sebastian Herkner to upcoming designers, ensuring a blend of global trends and local sensibilities.

This approach, combined with the integration of user feedback and our in-house expertise, allows us to create unique designs that enhance well-being and daily living.

EXCELLENCE

At Duravit, excellence is the cornerstone of our operations, combining technical expertise with artisan rather than artisanal craftsmanship. This is practiced at our global development centers and production plants, where our teams utilize state-of-the-art technologies and traditional skills with meticulous attention to detail.

Our commitment to excellence is more than a standard; it's a legacy embedded in our more than 200-year history, evident in every process, from development to customer service.

Our steady pursuit of excellence is integral to our mission of upgrading people's everyday lives, making every Duravit experience synonymous with unparalleled quality and innovation.

WELLBEING

At Duravit, we view the bathroom as more than just a functional space; it's a personal retreat for starting the day refreshed and ending it with a sense of calm.

Our products blend natural charm with practical elegance, creating spaces that offer peace and relaxation, adapting to the ever-shifting needs and aspirations of life.

Striving to make each bathroom a unique and personal haven, we focus on thoughtful design that brings together high standards of hygiene and functionality.

Our dedication is to enhance the daily routine, making every moment in these spaces comfortably personal and uniquely yours, reflecting our commitment to upgrade everyday living.

RESPONSIBILITY

At Duravit, we embrace our responsibility to the environment and people, focusing on the present and future generations. This commitment is woven into our sustainable practices and product designs that enhance everyday living.

We treat our resources with utmost respect and foster a working environment where every employee thrives, directly contributing to the quality and innovation in our products.

Our product development prioritizes functionality, durability, and sustainability, with a special emphasis on efficient water usage.

By considering diverse living situations and lifestyles, we ensure our solutions not only meet varied needs but also contribute to a more sustainable world.

Sustainability

We see it as our responsibility to treat resources with respect and supply products that are especially long-lasting and sustainable. To achieve our sustainability targets, we rely on new technologies, sustainable materials, and environmentally friendly logistics.

One central aspect in our strategy is a climate-neutral manufacturing process. It is our goal to become climate-neutral globally by 2045. In 2025 we will take a quantum leap towards our target by opening the world's first climate-neutral ceramic production facility in Canada. The plant also plays a crucial role in our "local-for-local" strategy, as the ceramic parts produced here are destined for the North American market.

Handling water responsibly is another key component of our strategy. This relates both to our manufacturing process itself as well as to the development of products with water saving technologies.

SUSTAINABILITY GOALS UNTIL 2030

Water
We're increasing our proportion of products with water-saving technologies to more than 80 percent.

Climate
We're reducing our global carbon emissions by 20 percent.

Ressources
We're increasing the proportion of recycled materials in our products to an average of 30 percent.

People
We're investing 0.5 percent of our annual company profits in global partnerships as well as in maintaining a high level of employee satisfaction.

Lifetime Warranty

Duravit Ceramics

Impeccable quality, maximum precision and sustainability are at the core of our product development and production. We are so convinced of the quality of our products that we are offering a lifetime warranty on our ceramics*.

End customers can easily register their Duravit ceramics up to 3 months after purchase online at duravit.com/lifetimewarranty and receive a personal warranty certificate. If a material, manufacturing, or construction defect is discovered, the defect can be claimed through the retailer from whom the ceramic was purchased. In case of a warranty issue, we will cover the costs of installing and removing the affected product.

HygieneGlaze® Plus

Our 2-in-1 Ceramic Innovation

As we are getting increasingly mindful of our health and well-being, bathrooms have become intimate places of retreat from the hustle and bustle of daily life. A retreat where we can focus on self-care and being truly ourselves. This evolution calls for innovative products that augment our well-being. We are introducing our revolutionary HygieneGlaze® Plus ceramic glaze, meticulously crafted to elevate every moment spent in the bathroom to a new level of hygienic cleanliness and comfort.

2-in-1 effect for next level hygiene

HygieneGlaze® Plus is the next milestone in our research into the field of sanitary ceramics. Its effectiveness is based on what is known as the oligodynamic effect: positively charged metal ions incorporated into the coating during the firing process ensure that our most advanced ceramic glaze yet eliminates 99.99 percent of bacteria within 24 hours. At the same time, the ultra smooth surface effectively minimizes dirt and limescale deposits.

HygieneGlaze® Plus – benefits at a glance

- Exceptional antibacterial effect for enhanced well-being.
- Easy to clean surfaces reduces the usage of water and detergents.

Our Artisan Lines range Aurena, designed by Antonio Citterio and the new edition of our Starck Barrel are the first Duravit series that are available with the HygieneGlaze® Plus ceramic glaze – with further ranges already being planned.

Aurena

DESIGN BY
ANTONIO CITTERIO

PART OF THE
ARTISAN
LINES

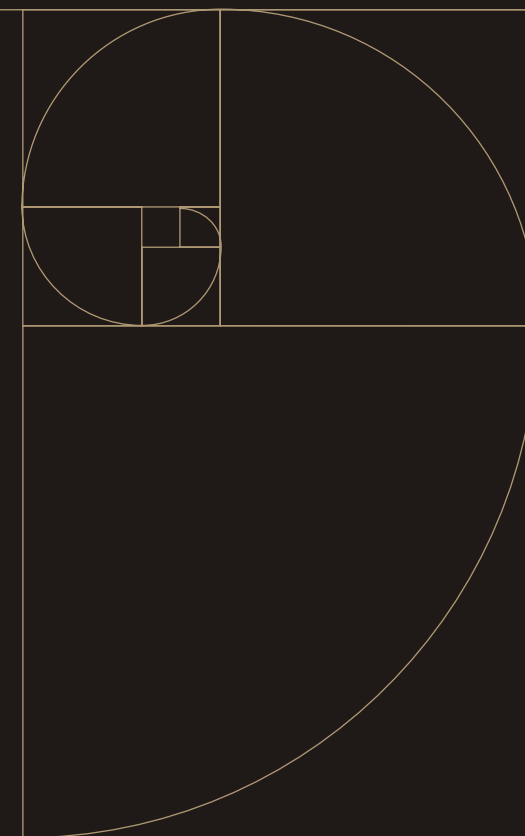

© Gianluca Di Iorio

DESIGN BY
ANTONIO CITTERIO

In architecture, the golden ratio is regarded as a formula for aesthetic harmony. For Antonio Citterio, designer and architect, it became a source of inspiration: his bathroom design for Duravit impresses with its perfectly balanced proportions.

The Aurena series is a masterful addition to the Duravit Artisan Lines, which represent exceptional design. The Artisan Lines feature outstanding and iconic design products with a hand-crafted character that Duravit develops in conjunction with renowned international designers. The design and manufacture of the Artisan Lines require an extraordinary level of knowledge, craftsmanship, and exacting precision.

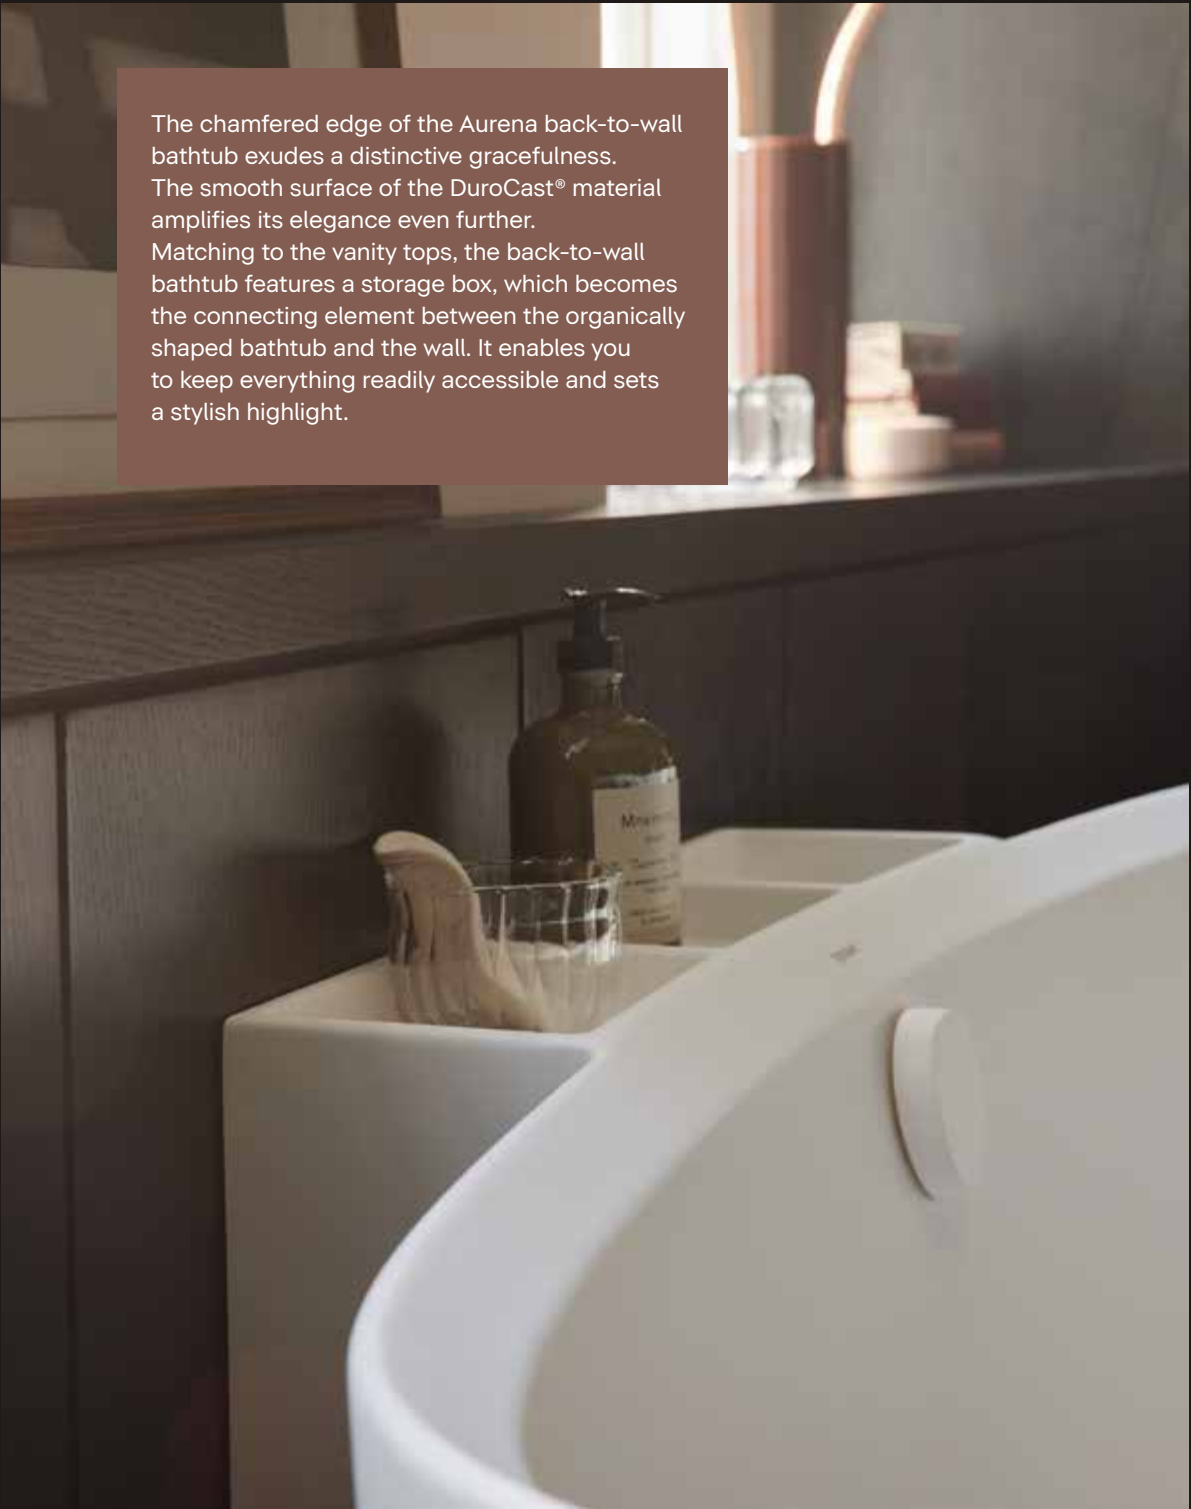

For Antonio Citterio, the starting point in the design process was to create a perfectly proportioned surface at the washing area: made entirely of ceramic and separated from the wet area, vanity tops with integrated dividers and precise, elegant contours ensure a tidy storage of bathroom accessories.

The chamfered edge of the Aurena back-to-wall bathtub exudes a distinctive gracefulness. The smooth surface of the DuroCast® material amplifies its elegance even further. Matching to the vanity tops, the back-to-wall bathtub features a storage box, which becomes the connecting element between the organically shaped bathtub and the wall. It enables you to keep everything readily accessible and sets a stylish highlight.

“I try to give straightforward solutions to reality. At the washbasin we need to hang a towel, we need large vanity tops, we need storage space – and it should all fit perfectly together.”

Antonio Citterio

Antonio Citterio opted for compact basin sizes to prioritize large vanity tops. An aluminum profile frame with a stainless-steel finish tightly combines the console with the vanity unit, with a projection on one side for a subtly integrated towel holder.

When designing furniture, Antonio Citterio thinks beyond pure form and considers the effect of the object on the room as a whole. The innovative design approach adopted for Aurena is expertly highlighted through the balanced color harmony and selected materials.

For Antonio Citterio, the furniture is an integral component of the design. Therefore he designed both open and closed options for the Aurena series.

A vanity unit made entirely of aluminum with an interior system offers open storage space. The double unit has a centered closed cabinet with two drawers for a combination of open and closed storage space.

A closed alternative is available in the form of a furniture unit with two drawers. This can be mounted in a hanging position on the wall or placed on a metal frame with graceful legs that enclose the carcass. Here the artisanal production processes are showcased with elegance: the mitred edges produce a front inset in the frame with extraordinary precision.

The Aurena series is rounded off with matching toilet and bidet, creating a comprehensive design concept.

Aurena is the first complete ceramic series to be launched with the new patented HygieneGlaze® Plus. The advanced ceramic glaze is a unique bathroom upgrade and combines exceptional hygiene with effortless, environmentally friendly cleaning.

DESIGN BY
PHILIPPE STARCK

Discover the sense of harmony

One series, endless possibilities

Philippe Starck once again pushes the boundaries of traditional bathroom design. His new series Svida is a refreshingly sleek range that combines an attractive interplay of soft forms and angular elements with a harmonious palette of color options. Svida offers new possibilities for individual bathroom designs with unmistakable details.

The Svida washbasins, countertop basins, and consoles can be seamlessly integrated into almost every bathroom. The range is the ideal choice for anyone who values both high quality and a timelessly modern design at an attractive price.

Svida features our mineral cast material DuroCast®. The harmonious interplay of countertop basins and consoles in DuroCast® gives the impression that they are created from a single piece.

Sivida
Washbasin
Design by Philippe Starck
Furniture
Design by Christian Werner

DuroCast®

DuroCast® is an in-house developed material made of natural minerals and resin. The temperature and impact resistant material combines durability and flexibility. It is resistant to wear and scratches, easy to clean and can be repaired. DuroCast® enables an almost limitless design freedom for an extremely elegant, precise,

and additionally two-tone design language. With its silkysoft surfaces DuroCast® is exceptionally smooth and gentle to the touch.

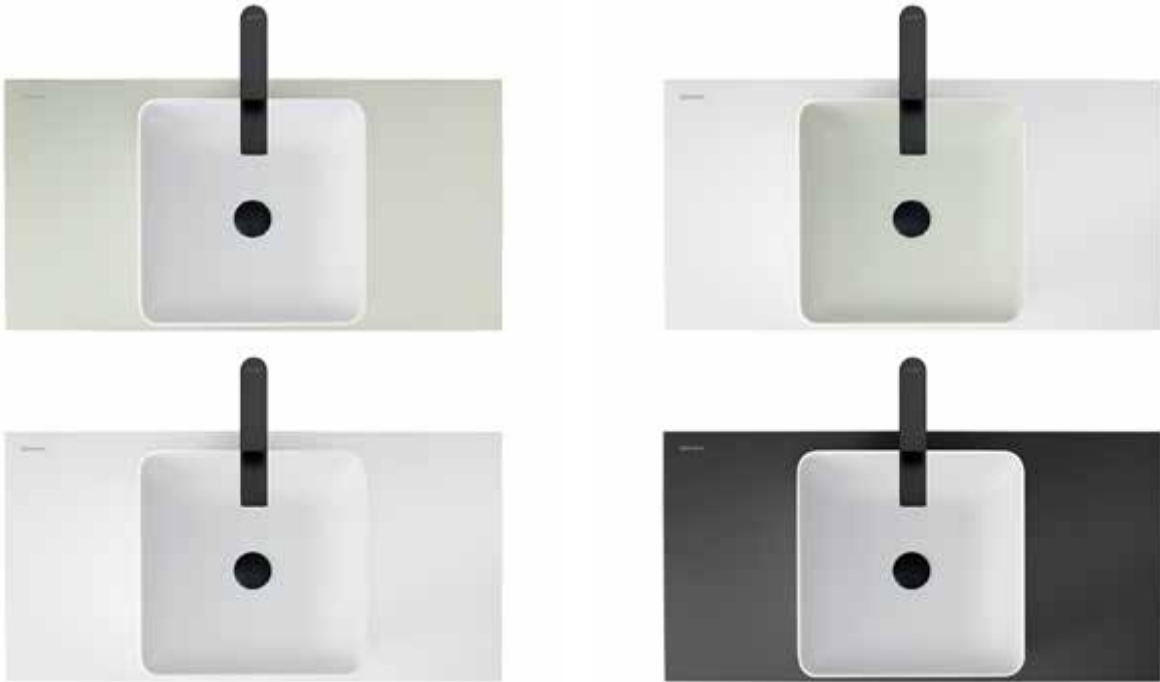

To bring Philippe Starck's design vision for Sivida to life, we exclusively utilize DuroCast® for the washbasins, countertop basins, and consoles.

More details on:
duravit.com/durocast

The elegantly shaped Sivida countertop basins sit on precisely finished consoles. With their gentle design language, they fit perfectly with a range of different bathroom styles. To give you the greatest possible choice of options when designing your Sivida bathroom,

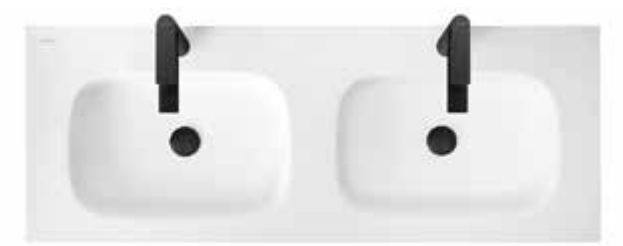

the countertop basins and consoles can be freely combined. The double washplace variant offers two washbasins in one unit – an ideal choice for couples and families. The spacious countertops are especially practical for day-to-day use.

The Sivida countertop basins are available in the colors Dark Grey Matt, White Satin Matt, and Pale Green Matt. To create distinctive highlights, they either have a white exterior or interior – an extraordinary two-tone concept that gives any room a fresh, modern aesthetic.

The combined qualities of our DuroCast® material ensure that the Sivida washbasins and consoles can withstand any daily challenge. Additionally, it allows for different color accents to be combined on both the interior and exterior surfaces.

Sivida is ideal for anyone seeking to make their washing area the central design element of their bathroom.

The range includes a broad selection of furniture washbasins – starting from the compact guest solution and extending through four additional sizes, right up to the double furniture washplace with two washbasins.

The spacious countertops offer ample storage surface for quick access to the bathroom utensils you use every day.

The furniture impresses with the centered position of the handles. This creates a very harmonious look and feel.

The conical shaped legs are a playful design element for even more self-expression. Their delicate and distinctive design elevates the look of the furniture. The towel rail matches the design of the feet perfectly and creates a harmonious overall look.

Feet, handles and towel rails are optionally available in the finishes Chrome or Diamond Black for a modern tone-in-tone bathroom.

Feets are also available in Chrome.

The furniture of the Sivida range is available in six colors. The optional interior system for the drawer encourages order in the bathroom, while a cabinet with two doors offers extra storage space for towels and other bathroom utensils.

One unique feature of the Sivida furniture range is the centered placement of the handles. This creates a reduced visual balance, aligning with Philippe Starck's sleek design philosophy for Sivida.

Handles are also available in Chrome.

Combining aesthetics with functionality, the Sivida mirror seamlessly integrates metal finishes and furniture surfaces, rounding off the Sivida washing area. The luminaire holders, positioned on the side, along with the optional shelf, elegantly enhance the overall design. Both the shelf and the luminaire holders are available in Chrome or Diamond Black as optional finishes.

WASHBASIN
DESIGN BY
PHILIPPE STARCK

FURNITURE
DESIGN BY
CHRISTIAN WERNER

With an additional furniture collection, designed by Christian Werner, Svida offers even more options for individualization. All Svida washbasins match perfectly with both furniture collections.

The continuous handles integrated into the furniture front highlight the horizontal plane and add structure to the carefully proportioned overall effect. At the same time, the pared-down, timeless design is the perfect combination with the gentle forms of the Svida washbasins and diverse color options.

This is also true of the matching Ketho.2 mirrors and mirror cabinets that integrate perfectly into the overall picture of Svida.

Starck Barrel

DESIGN BY
PHILIPPE STARCK

Anniversary of a design icon

This year we're celebrating the 30 years anniversary of Philippe Starck's masterpiece: the Starck Barrel. A unique eye-catcher since its debut in 1994, the distinctive yet timeless design has made the Barrel an icon.

1994

When Philippe Starck and Duravit started their first joint project, no one could imagine how successful this liaison would be. With its clear, timeless design language, the Starck Barrel has pushed the boundaries for bathroom designs and remains a best seller - even now 30 years later.

Inspired by the archaic forms of a bucket, Starck has created a timeless style icon whose essence is its reduction to the absolute essentials. Curved plywood forms the basis of the downward-tapering vanity unit, upon which the circular ceramic washbasin rests.

2024

To commemorate the 30th anniversary, we are introducing a subtly modernized version of the Starck Barrel. The new Barrel is equipped with the revolutionary Duravit c-bonded technology, creating a seamless transition from the washbasin to the furniture.

Thanks to four ceramic colors, eight lacquer surfaces in a glossy and satin matt finish as well as handles in five finishes, the new Starck Barrel can be customized to fullfill any bathroom vision.

Meticulously crafted, with attention to every detail, the Starck Barrel remains a distinctive design statement.

SensoWash® Starck f Pro

DESIGN BY
PHILIPPE STARCK

SensoWash®

Elevated
hygiene and
well-being

Naturally clean and fresh. Nothing compares to the thoroughness and natural feeling of cleansing with water. That's why an increasing number of people are opting for a shower-toilet. Water, considerably softer and gentler than toilet paper, not only provides a sensation of cleanliness that lasts all day but also a unique sense of well-being.

Setting the market standards for uncompromisingly minimalistic design upon its launch, the SensoWash® Starck f has gained popularity due to its sustainable design and comfort-enhancing technologies.

With the new SensoWash® Starck f Pro we are elevating our shower toilet range. The new, efficient high-speed dryer reduces toilet paper consumption, and additional hygiene is provided through the UVC light disinfection function. The rechargeable remote-control completes the array of new features.

More information about
SensoWash® Starck f Pro:
duravit.com/starckfpro

HygieneGlaze®
ceramic glaze

Additional features NEW

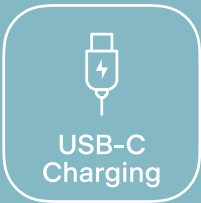

HygieneUV disinfection

With its new HygieneUV disinfection, SensoWash® Starck f Pro offers strong protection against bacteria and viruses. UV light is highly effective at disinfecting surfaces. Unlike traditional cleaning agents that may contain harsh chemicals, UV light provides a chemical-free, environmentally friendly method of disinfection. Once programmed in the app, the disinfection cycles start automatically. For a germ-free toilet without the hassle of cleaning.

High speed air dryer

The integrated high speed dryer with two configurable levels dries up to three times faster than traditional dryers. Thereby you can reduce the toilet paper usage to a minimum.

USB charging

The USB charging function on the remote control of SensoWash® Starck f Pro offers convenience, cost-effectiveness, and sustainability compared to traditional batteries. With USB charging, you no longer need to remember to buy batteries, simplifying maintenance.

SensoWash® Starck f Family

Resource saving faucets

Faucets and showers play a crucial role in our sustainability strategy, leveraging water and energy-saving technologies to minimize resource usage and cut consumption costs.

At Duravit, sustainability is not just a trend, it's a commitment. We want to offer you products that help reducing your ecological footprint, save water and reduce CO2 emissions without compromising on comfort or style.

As a next step in our sustainability journey, we are pleased to introduce faucets combining the FreshStart and the MinusFlow features. This enables you to reduce both water and energy consumption simultaneously, benefiting the environment while also cutting down on your expenses.

Main features

FreshStart

Energy saving: Faucets with FreshStart function start in the middle setting with cold water. Only when you consciously move it to the left, hot water is added. This reduces energy consumption and thus lowers energy costs and CO2 emissions.

MinusFlow

With a flow rate of 5.5 l/min, Duravit faucets use hot water and energy sparingly. Even more economical are the faucets with MinusFlow, where the flow rate is limited to 3.5 l/min, lowering water consumption with up to 40 percent compared to conventional faucets.

Touchless

The electronic faucets from the Sensor 1 series are hygienic, sustainable and cost-saving thanks to the infrared sensor and the feature that automatically stops the water flow after use. They work particularly well in public or semi-public areas thanks to their contactless operation.

Sensor 1

Hygiene in the bathroom has always been an important factor. Due to past pandemics, hygienic products are more in demand than ever. Whether at the airport, in fitness studios, restaurants, hotels or even in the private bathroom, the Sensor 1 faucet can be operated touch-free thanks to infrared electronics and is therefore particularly hygienic. The modern and understated design blends seamlessly into the interior design.
